adidas GOLF SHOE CARE KIT

World-class footwear deserves accessories of the same calibre. From our NEW Shoe Care Kit, to replacement cleats and laces, adidas Golf is committed to providing the necessary tools to keep you at the top of your game. The adidas Golf Shoe Care Kit will make your leather golf shoes last even longer and keep them looking great over the long term. It's packable and comes with a high quality shoe brush, premium polishing cloth, and both black and neutral leather polish. Give your adidas Golf shoes the care they deserve.

KIT: L06133
(Contents: 1 Shoe Care Kit Storage Bag, 1 Shoe Shine Brush, 1 Professional Shine Cloth, 2 Cans Premium Shoe Polish, Black and Neutral (50ml each))

GET LOWER!

This break-through in performance innovation creates a lower profile platform that reduces the distance between your foot and the course. The result? More stability, better balance, improved footwork and ultimately better ball-striking.

The human foot is unique and highly functional. Our goal is to create shoes that work with the foot, not against it. Understanding how the foot works during all movement phases of the sport of golf dictates how we build our shoes. adidas Golf performance technologies deliver out-of-the-box comfort, glove-like fit, rock solid stability and anchor-like traction. Our never-ending pursuit of innovative performance technologies is focused on the following six key performance areas.

 STABILITY Stability is a necessity for making a powerful, consistent and confident swing; you'll get it from adidas Golf's rock-solid foundation technologies.	 POWER adidas Golf specialises in technologies that eliminate power leaks and which promote more efficient management of energy. We're experts at helping athletes gain greater speed, agility and leverage at ground level, which helps optimise load-force at the top of the swing, promotes increased speed through the impact zone and encourages a full and balanced follow-through and finish.	 GRIP adidas Golf advanced grip technologies deliver lock-down traction to keep your feet in place and promote balance, power and control.	 ELEMENTS Cold and wet? Hot and dry? Somewhere in between? adidas Golf climate technologies are engineered to optimise comfort and performance in every conceivable on-course condition.	 COMFORT/CUSHIONING adidas Golf comfort technologies were developed to cradle and support your feet, reducing fatigue during the hours you spend swinging and walking.	 DURABILITY adidas Golf durability technologies protect key wearpoints on our shoes to help them perform longer and keep them looking great for the long run.
 THiNTech Low-profile outsole technology brings you even closer to the ground for improved stability, better overall footwork and ultimately more consistent ball-striking.	 GRIPZONE A textured surface that locks the foot securely in place, turning the foot and shoe into a single, solid unit that promotes maximum power and control.	 TRAXION® A high-traction outsole technology featuring secondary lugs that are strategically shaped and placed to provide maximum grip and prevent slippage on all types of ground surfaces while remaining green-friendly.	 CLIMAPROOF® Combines technologies to deliver 100% waterproof protection. The first layer wicks inside moisture to the shoe's surface, while the second layer surrounds the foot with a waterproof membrane.	 FitFOAM™ A moulded polyurethane inlay sole that supports the golfer's foot from heel to toe for enhanced fit, comfort and balance.	 adiWEAR® An extremely durable, non-marking rubber used for outsoles that offers the optimal balance of abrasion resistance, traction and flexibility, and which resists wear for the long haul.
 360WRAP Upper components that surround and bolster the foot in strategic locations promote unsurpassed stability and tour-calibre performance.	 POWERBAND CHASSIS New, exclusive 1-piece TPU forefoot platform replaces the conventional 2-piece midsole/outsole construction to deliver unrivaled power and stability.	 THiNTech cleat An advanced, cleat system that combines a low-profile, anti-clogging cleat design and thinner outsole receptacle to bring you lower to the course for better power transfer, more stability, better balance, improved overall footwork and ultimately more consistent ball-striking.	 50/50 PROTECT A revolutionary technology that combines a water – and soil – repellant lower half with an "open" upper half that's extraordinarily breathable, light weight and flexible, creating a union of performance and comfort never before possible.	 adiPRENE® Provides long-lasting impact absorption in the heel for long-lasting comfort.	 adiTUFF™ adiTUFF™ technology delivers improved durability and abrasion resistance in the toe area and keeps the shoe looking great.
 TORSION® SYSTEM Lightweight arch support that provides greater torsional flexibility with additional longitudinal structure and support. This allows the forefoot and rearfoot to move independently for better ground surface adaptation and stability during the golf swing.	 FORMOTION™ A system of decoupled outsole parts that allow specific zones to move more freely. This keeps the shoe with the foot for a more balanced and stable golf swing while softening the heel strike for a much smoother and natural feel each and every step.	 ADVANCED TRAXION TECHNOLOGY A versatile and innovative outsole design that utilises permanent gripping elements to promote superior grip, stability and comfort, while preventing spike marks.	 CLIMACOOL® An exclusive technology that provides maximum all-around ventilation to keep the foot cool, dry and comfortable.	 adiPRENE®+ A highly resilient material that manages energy for improved response in the footbed. This technology's fast, reactive response provides immediate feedback to promote improved footwork for better weight transfer and balance.	

Le pied humain est unique et extrêmement fonctionnel. Nous cherchons à créer des chaussures qui agissent avec lui et non pas contre lui. C'est la manière dont le pied se comporte à chacun des mouvements effectués au cours du jeu qui dicte les caractéristiques de nos chaussures de golf. Issues de technologies élaborées, les chaussures adidas Golf sont confortables dès le premier jour et s'adaptent parfaitement au pied, en offrant une stabilité et une traction à toute épreuve. Notre recherche permanente dans les technologies performantes et innovantes se concentre sur six domaines clés :

STABILITE
Pour un swing puissant, régulier et sûr, le pied doit être parfaitement stable. C'est le cas avec l'assise à toute épreuve des semelles adidas Golf.

PUISANCE
adidas Golf est spécialisé dans les technologies éliminant la baisse de puissance et permettant une meilleure gestion de l'énergie. Nous savons parfaitement comment aider les joueurs à améliorer leur vitesse, leur agilité et leur prise au sol, afin d'optimiser leur puissance en fin de swing, d'augmenter la vitesse au niveau de la zone d'impact, de poursuivre et de terminer leur geste jusqu'au bout et en douceur.

ACCROCHE
Les technologies avancées d'adidas Golf dans le domaine de l'accroche offrent une traction inégalée pour que le pied reste en place, favorisant ainsi l'équilibre, la puissance et le contrôle.

INTEMPERIES
Il fait froid et humide ? Chaud et sec ? Ni l'un, ni l'autre ? adidas Golf a conçu des chaussures optimisant le confort et les performances quelles que soient les conditions météorologiques.

CONFORT/AMORTI
adidas Golf a conçu des technologies pour améliorer le confort et le maintien du pied, réduisant ainsi la fatigue due aux longues heures de marche et de jeu.

RESISTANCE
adidas Golf a mis au point des technologies protégeant les points de frottement des chaussures afin qu'elles offrent les mêmes performances plus longtemps en conservant leur superbe aspect.

THiNTech
La technologie de la semelle extérieure abaissée vous rapproche du sol, ce qui améliore la stabilité, le travail général du pied et, au final, homogénéise la frappe de balle.

360WRAP
Des pièces supérieures entourant et soutenant le pied aux endroits stratégiques, pour garantir une stabilité inégalée et des performances idéales pour le tour.

SYSTEME DE TORSION
Un soutien en arche léger, qui assure une flexibilité supérieure à la torsion, garantit une structure et un soutien longitudinaux supplémentaires. L'ensemble permet à l'avant et à l'arrière du pied de se déplacer indépendamment, pour mieux s'adapter à la surface au sol et accroître la stabilité au moment du swing.

GRIPZONE
Une surface texturée maintenant la base du pied solidement en place, pour qu'il ne fasse qu'un avec la chaussure et assure un contrôle et une puissance maximum.

POWERBAND CHASSIS
Nouvelle plate-forme exclusive pour l'avant-pied, en TPU 1 pièce, qui remplace la conception traditionnelle en 2 pièces, semelle intermédiaire et semelle extérieure, pour assurer une puissance et une stabilité sans égales.

FORMOTION™
Un système de pièces découpées pour la semelle extérieure, qui permet un déplacement plus libre des zones spécifiques. Ceci maintient la chaussure au plus près du pied pour un swing plus équilibré et plus stable, tout en assouplissant la frappe au talon, d'où des sensations plus douces et naturelles à chaque pas.

TRAXION®
Une semelle extérieure très adhérente, dotée de crampons secondaires à la forme étudiée et placés pour assurer une prise optimale sur le sol et éviter de glisser quelle que soit la surface, tout en respectant le gazon.

Crampons THiNTech
Un système de crampon moderne, associant une conception mince, anti-dépôts, à un réceptacle plus mince de la semelle extérieure, pour vous abaisser sur le cours afin de parvenir à un meilleur transfert de puissance, plus de stabilité, un meilleur équilibre et un travail du pied globalement amélioré, pour finir par une frappe de balle plus cohérente.

ADVANCED TRAXION TECHNOLOGY
Une conception de semelle polyvalente et innovante utilisant des éléments d'accroche permanente pour promouvoir un grip supérieur, la stabilité et le confort, tout en évitant les marques.

CLIMAPROOF®
ClimaProof® associe plusieurs technologies offrant une imperméabilité totale. La première couche évacue l'humidité à la surface de la chaussure, tandis que la seconde enveloppe le pied d'une membrane imperméable.

50/50 PROTECT
Une technologie révolutionnaire qui associe à une base qui protège de l'eau et de la terre, un dessus ouvert, très respirant, léger et souple, pour une chaussure haute performance et d'un confort inégalé.

CLIMACOOOL®
Une technologie exclusive qui assure une aération maximum sur tout le pied pour qu'il reste confortablement au frais et au sec.

FitFOAM™
Une semelle intérieure en polyuréthane moulé, qui soutient le pied du joueur, du talon à la pointe, pour améliorer l'ajustement, le confort et l'équilibre.

adiPRENE®
Une absorption prolongée de l'impact au niveau du talon pour un confort longue durée.

adiPRENE®+
Un matériau ultra résistant qui gère l'énergie pour une meilleure réaction au niveau de l'assise plantaire. Cette technologie rapide et réactive permet d'améliorer immédiatement le travail du pied et d'assurer un meilleur transfert de poids et d'équilibre.

adiWEAR®
Un caoutchouc utilisé pour la semelle extérieure, extrêmement résistant et ne laissant pas de marques, qui offre le parfait équilibre entre résistance à l'abrasion, traction et souplesse. Pratiquement inusable.

adiTUFF™
Une technologie assurant une amélioration de la solidité et de la résistance à l'abrasion sur la pointe, et qui maintient un aspect idéal de la chaussure.

Der menschliche Fuß ist einzigartig und hochfunktional. Unser Ziel ist es, Schuhe zu entwickeln, die mit dem Fuß arbeiten und nicht gegen ihn. Da wir genau wissen, wie der Fuß während aller Bewegungsphasen beim Golfsport arbeitet, bieten Performance-Technologien von adidas Golf Tragekomfort ab der ersten Minute – mit Golfschuhen, die wie angegossen passen und Sie als ultrastabile Abschlagsplattform fest im Boden verankern. Bei der Weiterentwicklung innovativer Performance-Technologien setzen wir sechs Schwerpunkte:

STABILITÄT

Stabilität ist eine Grundvoraussetzung für einen starken, konsistenten und sicheren Golfschwung – und genau das leisten die ultrastabilen Sohlentechnologien von adidas Golf.

POWER

adidas Golf spezialisiert sich auf Technologien, die eine verlustfreie Kraftumsetzung und ein effizienteres Energiemanagement ermöglichen. Wir sind Experten darin, Athleten zu mehr Geschwindigkeit, Bewegungsfreiheit und Bodenhaftung zu verhelfen. Dadurch wird nicht nur die Kraftansammlung beim Höhepunkt des Golfschwungs optimiert, sondern auch mehr Geschwindigkeit im Treffmoment und ein volles, ausgewogenes Durchziehen unterstützt.

HALT

Die modernen Haftungstechnologien von adidas Golf sorgen für einen ultrastarken Stand: Fest im Boden verankert profitieren Sie von einem besseren Gleichgewicht sowie mehr Kraft und Kontrolle.

FÜR WIND UND WETTER

Kalt und nass? Warm und trocken? Oder irgendetwas dazwischen? Die Klimatechnologien von adidas Golf wurden für einen optimalen Tragekomfort und eine maximale Performance bei allen Bedingungen auf dem Platz entwickelt.

KOMFORT/DÄMPFUNG

Die Komforttechnologien von adidas Golf wurden entwickelt, um Ihre Füße mit einer besseren Hebelwirkung zu unterstützen und die Ermüdung selbst nach Stunden auf dem Platz zu reduzieren.

HALTBARKEIT

Die Haltbarkeitstechnologien von adidas Golf schützen wichtige Abnutzungsbereiche am Golfschuh, damit Sie länger von einer optimalen Leistung profitieren – und damit Ihre Schuhe stets einen guten Eindruck machen.

THiNTech

Das flache Profil der Außensohle sorgt für einen optimalen Bodenkontakt und dadurch mehr Stabilität. Das schafft die Voraussetzungen für eine insgesamt bessere Beinarbeit und damit letztlich eine konsistentere Ballansprache.

GRIPZONE

Strukturierte Oberfläche, die die Fußsohle sicher am Platz hält, wodurch Fuß und Schuh zu einer einzigen, soliden Einheit für maximale Power und Kontrolle verschmelzen.

TRAXION®

Außensohlen-Technologie für eine hohe Bodenhaftung. Strategisch angeordnete, speziell geformte Z-Profile geben maximalen Halt und verhindern ein Rutschen auf jedem Untergrund, ohne das Grün zu beschädigen.

CLIMAPROOF®

Vereint verschiedene Technologien, die dem Schuh eine 100 % Wasserdichtigkeit verleihen. Während im Schuhinneren die Feuchtigkeit aufgenommen und über die Sohle nach außen abgegeben wird, wird der Fuß außen von einer wasserdichten Membrane umschlossen.

FitFOAM™

Geformte Einlegesohle aus Polyurethan, die Halt vom Fersen- bis zum Zehenbereich gibt – für eine bessere Passform, mehr Komfort und ein stärkeres Gleichgewicht.

adiWEAR®

Extrem haltbare, widerstandsfähige Außensohle aus Gummi, die keine Absatzstreifen hinterlässt und dank ihrer optimalen Mischung aus geringer Abnutzung, Bodenhaftung und Flexibilität eine lange Haltbarkeit garantiert.

360 FIT

Strategisch angeordnete Komponenten im oberen Schuhbereich, die den Mittelfuß unterstützen und für eine optimale Polsterung sorgen – für einzigartige Stabilität und Performance auf Tour-Niveau.

POWERBAND CHASSIS

Neue, exklusive TPU-Plattform für den Ballenbereich. Das einteilige Design ersetzt herkömmliche zweiteilige Mittel- und Außensohlen-Konstruktionen und verleiht Power und Stabilität auf neuem Niveau.

THiNTech-Spikes

Modernes Spike-System mit flachem Profil, Schmutz abweisendem Design und Gewinden für dünnere Außensohlen. Verbessert den Bodenkontakt und die Kraftübertragung für mehr Stabilität, ein stärkeres Gleichgewicht, eine bessere Beinarbeit und damit letztlich eine konsistentere Ballansprache.

50/50 PROTECT

Revolutionäre Technologie mit wasser- und schmutzabweisendem Unterschuh und „offener“ Oberseite, die sich durch Eigenschaften wie eine extreme Atmungsaktivität, leichtes Gewicht und Flexibilität auszeichnet und eine bislang ungeahnte Einheit aus Performance und Komfort schafft.

adiPRENE®

Bietet eine dauerhafte Dämpfungszone im Fersenbereich für lang anhaltenden Tragekomfort.

adiTUFF™

Die adiTUFF™-Technologie verbessert die Langlebigkeit und verringert die Abnutzung im Zehenbereich, damit der Schuh stets gut aussieht.

TORSION® SYSTEM

Die ultraleichte Verstärkung umschließt und stützt den gesamten Fuß, ermöglicht mehr Flexibilität in der Drehung und bietet zusätzlichen strukturellen Halt in der Längsrichtung. Dadurch können sich der Vorder- und Hinterfuß unabhängig voneinander bewegen, was die Anpassung an den Untergrund verbessert und mehr Stabilität beim Golfschwung bietet.

FORMOTION™

System aus entkoppelten Außensohlenteilen, die in bestimmten Bereichen mehr Bewegungsfreiheit ermöglichen. Dadurch schmiegt sich der Schuh eng an den Fuß, was mehr Balance und Stabilität beim Golfschwung bietet, während die Dämpfung im Fersenbereich ein wesentlich gleichmäßigeres, natürlicheres Laufgefühl bietet.

ADVANCED TRAXION-TECHNOLOGIE

Vielseitiges, innovatives Außensohlen-Design mit festen, stabilisierenden Elementen für mehr Tragekomfort und eine ausgezeichnete Bodenhaftung und Stabilität, ohne Spike-Abdrücke zu hinterlassen.

CLIMACOOL®

Exklusive Technologie für eine optimale Belüftung von allen Seiten, die den Fuß kühl und trocken hält und für ein angenehmes Tragegefühl sorgt.

adiPRENE®+

Hochelastisches Material für eine optimale Energieverteilung und bessere Ansprache im Fußbett. Das schnelle, reaktive Ansprechverhalten bietet eine sofortige Rückmeldung und unterstützt so eine bessere Beinarbeit für eine optimale Gewichtsverteilung und ein stärkeres Gleichgewicht.
